COMSEC

GLOBAL COUNTERESPIONAGE SPECIALISTS

Introduction

Every day, illegal eavesdropping occurs in personal spaces and on personal devices. Bad actors are hard at work to gain access to your home, wi-fi and devices so they can access your personal information and violate your privacy. From corporate espionage attacks on executive homes, to information gathering against litigants, to financial and/or identity fraud targeting, bad actors will go to any length to capture valuable information exchanged in personal spaces.

When you suspect your personal spaces and devices are compromised, you need comprehensive Residential Technical Surveillance Countermeasures (TSCM)/ Cyber TSCM services to detect these attacks. Your privacy is too important to leave compromised. But what can you do?

Enter the ComSec Global Counterespionage Specialists.

Who We Are

Global Counterespionage Specialists

At ComSec LLC, we are counterespionage experts with over 30 years of experience, specializing in threat assessments, electronic surveillance detection and restoring privacy and peace of mind.

With our expertise, we detect bugging devices and other technical surveillance threats to help our clients restore their privacy. How? We use a multi-faceted approach that includes HUMINT (Human Intelligence), cyber technical surveillance countermeasures (Cyber TSCM), mobile device spyware/malware examinations and vehicle TSCM services. We also provide OSINT (Open Source Intelligence) Personal Data Scans. Our services identify human, technical, and electronic threats.

We provide you with an all-inclusive service with the goal of restoring your privacy and peace of mind. We listen to you. We focus on your needs. We give you a thorough and effective service. That's why we are a top-rated, world-class, professional counterespionage company.

How ComSec Defends Your Interests

ComSec puts over three decades of combined Counterintelligence, Cyber & TSCM experience to work for you. Since its formation in 2007, ComSec LLC has become a globally recognized leading TSCM/Cyber TSCM services provider. We offer world-class electronic eavesdropping detection advisory services to our clients in the United States and abroad. And, through our dedication to excellence and providing outstanding customer service, we maintain an A+ BBB rating.

Highlights:

- We use proprietary processes that are highly effective in detecting electronic and cyber eavesdropping attacks;
- Our TSCM/Cyber TSCM Specialists are among the best in the industry, each being highly trained and having several decades of hands on experience detecting and investigating electronic eavesdropping penetrations;
- We use only the most technologically advanced and effective TSCM/Cyber TSCM equipment to perform our services; and
- We are "Cyber TSCM" visionaries and leaders in the detection of cyber eavesdropping devices and threats.

ComSec LLC's Residential TSCM / Cyber TSCM services clients include business owners, CEO's and other executives, celebrities, high net worth individuals, those who work from home, those involved in litigation, and other high-risk individuals who believe their privacy has been compromised. From 50,000+ sq. ft. estates to condominiums, our Specialists provide professional services that restore your privacy and peace of mind.

Our Detection Capabilities

ComSec's TSCM/Cyber TSCM services address a wide variety and complexity of electronic eavesdropping devices and vulnerabilities. From inexpensive spy shop devices to advanced persistent threats, we hunt the devices and threats that can compromise your privacy and security.

Using technologically advanced equipment, proven protocols and their extensive knowledge of eavesdropping devices and vulnerabilities, our Specialists provide world-class TSCM/Cyber TSCM services.

ComSec's TSCM/Cyber TSCM services detect electric eavesdropping devices, cyber eavesdropping devices and threats, devices that are switched on and in use, devices that are powered on but in standby mode, or even switched off devices without any power.

Examples of the types of electronic eavesdropping devices and threats we detect are:

- Elicit audio or optical bugging devices
- GSM, 2G, 3G, 4G and LTE cellular eavesdropping devices
- Wireless bugs
- Wire & mic taps and telephone taps
- Carrier current bugs
- Micro wireless video devices
- Laser or infrared eavesdropping devices
- Ultrasonic eavesdropping devices
- VoIP phone intrusions
- Illicit IMSI catcher attacks
- Audio/visual equipment vulnerabilities
- Wi-Fi intrusions
- Bluetooth vulnerabilities
- Mobile device and computer spyware/malware
- GPS tracking and eavesdropping devices in/on vehicles

ComSec's electronic and cyber eavesdropping detection capabilities are known for being the best in the industry. And, we continually seek out the most advanced detection equipment to address the ever-changing threat landscape, which provide our customers with a technological advantage.

**Trust ComSec's
TSCM/Cyber TSCM
services to detect your
exposures before your
valuable information is
compromised.**

Residential TSCM/Cyber TSCM Services

ComSec offers the following residential services:

ComSec understands the vulnerabilities that can result from a breach of privacy in your personal spaces and/or with your personal devices. That's why our residential services are focused on restoring your privacy and your peace of mind!

If you suspect electronic eavesdroppers have compromised your personal space, then you need a professional TSCM / Cyber TSCM services company to perform a comprehensive Residential TSCM/Cyber TSCM survey.

ComSec LLC's Residential TSCM/Cyber TSCM services include a survey of your residence, Wi-Fi, vehicles, and spyware/malware detection for mobile devices and computers. Why include your Wi-Fi, vehicles, mobile devices, computers, etc.? Electronic eavesdroppers target Wi-Fi, vehicles and personal devices because of the vast amount of information that can be obtained.

As an example:

- By hacking into your Wi-Fi, eavesdroppers can collect information from the connected devices. And they can also disable Wi-Fi connected devices such as security cameras.
- By placing a GPS tracker on your vehicles or an electronic eavesdropping device in your vehicles, an eavesdropper can gather information about your movements, your schedules, your contacts, private conversations, etc.
- By installing spyware/malware on your mobile devices or computers, an eavesdropper can access your location, emails, contacts, text messages, photos, videos, voice mails, usernames & passwords, Internet searches, use the camera and/or microphone at will, etc.

From large estates, to executive homes, to corporate apartments, ComSec's residential TSCM /Cyber TSCM services are a wise choice in your effort to protect your privacy, your personal information and your security.

Additional Services

Cell Phone Forensics

One of the weakest links in personal security is a cell phone. Why? A cell phone is usually always turned on and not more than 6' away from the user. Once spyware/malware is installed on a cell phone, the perpetrator can access information on the device, and even record your voice, image and track you wherever you go. This type of privacy invasion can be personally or financially devastating, and it can compromise your personal security.

ComSec LLC provides cell phone forensic services for clients who believe their mobile device is compromised by spyware, malware, key loggers, and other malicious payloads. We use Cellebrite cell phone forensic technology, which is preferred by law enforcement, military, and intelligence services. The software detects the presence of spyware/malware, and provides information about how and when the device became infected. The service also includes an electronic report of the contents of the device* including:

- SMS text messages
- Emails
- Calls dialed, calls received, call times, and call durations
- Contacts (contact names and phone numbers)
- Residential and email addresses in the address book
- Locations based on wifi, cell towers, and GPS coordinates
- Photos
- Videos

To initiate services, send your cell phone and the completed service request form to ComSec LLC's Virginia Beach, VA office. Within 2-3 business days of our receipt of your cell phone, you will receive an email with instructions to retrieve your electronic report and we will ship your device to you.

Do you suspect your cell phone is infected with spyware/malware? Know for certain with ComSec LLC's cell phone forensics services.

Note: the report includes the undeleted contents of the device. If the content has been deleted and written over in the memory of the device, the information will not be included in the report.

ComSec is a trusted partner in the war against electronic eavesdropping attacks.

OSINT Personal Data Scan

How much information about you is available on the Internet? Is there enough cumulative information that a bad actor could locate you, impersonate you to gain access to your accounts, or otherwise use this information to compromise your identity, privacy or safety? A ComSec OSINT Personal Data Scan can help you access the type and extent of information that is publicly available, and to take action to protect your privacy and security.

Why Certain Personal Information on the Internet May Be Detrimental to You

- Individuals seeking retaliation may attempt to locate you, particularly if you work in certain professions.
- You may be visited at home by person(s) who seek to harm you, your spouse, roommates or children.
- You may be targeted by groups or individuals with opposing views or biases.
- The information may be used for identity theft or financial theft purposes.
- Foreigners may target you for certain scams or types of theft. Someone may pose as you on a call or in person and use the information for nefarious purposes.

Our OSINT Personal Data Scan services are provided by an OSINT expert, and not an automated software program. First, we provide a snapshot of the publicly available information in an electronic summary report. Then, we can offer follow on services to provide assistance in the removal of certain types of information from the Internet.

ComSec's OSINT personal data scan can help understand your exposures, and help you to better protect your privacy and personal security.

ComSec's OSINT personal data scan can help you understand your exposures, and help you to better protect your privacy and personal security.
