

Specifically designed to provide speech protection from the threat posed by mobile phones in secure areas and meeting rooms

CELL PHONE MOBILE PROTECTION BOX (CMPB)

The portable Cell Phone Mobile Protection Boxes provide an effective electronic solution to the problem of having mobile phones in sensitive areas . . . when these devices may be transmitting or recording speech.

Security Advisers recognize that we need our mobile phones to keep in touch, but that these can introduce serious security risks. The CMPB devices house a proprietary protection device that inhibits the microphones within the mobile handset, without affecting their ability to receive phone calls, text messages, email.

KEY FEATURES

- Option to house 1-10 handsets
- Internal handset charging
- Portable
- CMPB-2 can have in-built UVC disinfectant capability
- Internal batteries allow boxes to be moved while in use

The CMPBs have a safe working level without damaging phone handsets. They are effective on the latest mobile phones that have a diverse range of in-built microphones.

Full Confidence

CMPB-T1 & T2 are new test devices which are available to provide electronic verification for confidence that each CMPB is fully functional.

These are used by in-house Red Teams to ensure all deployed devices are working as they should through periodic testing.
